Exercise 1.3.1

Task 1

Answer the following using Python:

What is your name? Assign the value to the variable `name`

How old are you? Assign the value to the variable `age`

Are you a male or female? Assign the value to the variable `gender`

What state did you come from? Assign the value to the variable `state`

What language can you speak? Assign the value to the variable `language`

True or False, do you smile today? Assign the value to the variable `smile`

The list of the variables to create and assign values to are:

`name`

`age`

`gender`

`state`

`language`

`smile`

```
### CG T1
### write your code here:

name = 'Melody_Ogbonna'

age = 28

gender = 'Female'

state = 'Imo'

language = 'igbo'

smile = 'true'
```

Task 2

Explain why some variable names in the example are acceptable and why some are not in Python

	Sample of acceptable variable names	Unacceptable variable names
1	grade_test	test(grade)
2	covid_19_cases	covid-19-cases
3	term2	2 term
4	Sale_price_2021	2021sales_price
5	miva_learners	miva&learners

1. garde_test this is acceptable because it cantains only lettres and underscore.
2. covid_19_cases is acceptable it used letters, numbers, and underscore correctly and it starts with a letter.
3. term2 is acceptable bacause it starts with a letter and numbers are allowed at the end.
4. sale_price_2021 this is acceptable because it begins with a letter and uses underscore instead of spacing.
5. miva_learners this is acceptable because it contain only letters and an underscore.

Close

```
1. test(grade) is not acceptable because parentheses are special characters and cannot be used in varraible names.

2. covid-19-cases is not acceptable becaused the hypen is treated as a subtraction operator in phyton.

3. 2 term is not acceptable because it start with a number and also contains space.

4. 2021sales_price is not accepted because varraible names cannot begin with a number.

5. miva&learners this is acceptable because the ampersand is a special character and cannot be used in varraible names.
```

1. test(grade) is not acceptable because parentheses are special characters and cannot be used in varraible names.
2. covid-19-cases is not acceptable becaused the hypen is treated as a subtraction operator in phyton.
3. 2 term is not acceptable because it start with a number and also contains space.
4. 2021sales_price is not accepted because varraible names cannot begin with a number.
5. miva&learners this is acceptable because the ampersand is a special character and cannot be used in varraible names.
